

Harmony Hub — we build, you relax!

Harmony Hub is a manufacturing company that has been successfully operating in the Moldovan market for over 5 years, specializing in the design and construction of modular frame structures. All our projects are based on a **metal frame**, which ensures the strength, durability, and precise geometry of the modules. We are consistently developing the direction of modular construction, creating solutions for private, commercial, and tourism projects. Today, Harmony Hub implements: modular and frame residential houses; mirrored frame houses; modular outdoor saunas; modular and individual garages for cars and motorcycles; advertising and commercial modules; non-standard frame structures based on client tasks. The company's key advantage is a **full production cycle**. All stages, from design and frame manufacturing to assembly, insulation, finishing, and final preparation of the product, are performed at our own production facility in Chisinau. We fully control the quality and deadlines without outsourcing key processes. The Harmony Hub team consists of 10 specialists with an engineering approach and practical experience. We use only proven materials and create functional, reliable, and ready-to-use modular solutions. Harmony Hub is a production where every structure is created with our own hands and with full responsibility for the result.

Features and Model Options- "Hub 220"

Hub 220 is a compact and stylish modular sauna, ideally suited for private homes and small plots. The modern **Glass-front design** with panoramic glazing and natural wood finish creates a sense of comfort, light, and visual space. Key advantages: Glass-front panoramic glazing; fully ready for use; natural finishing materials; fast installation

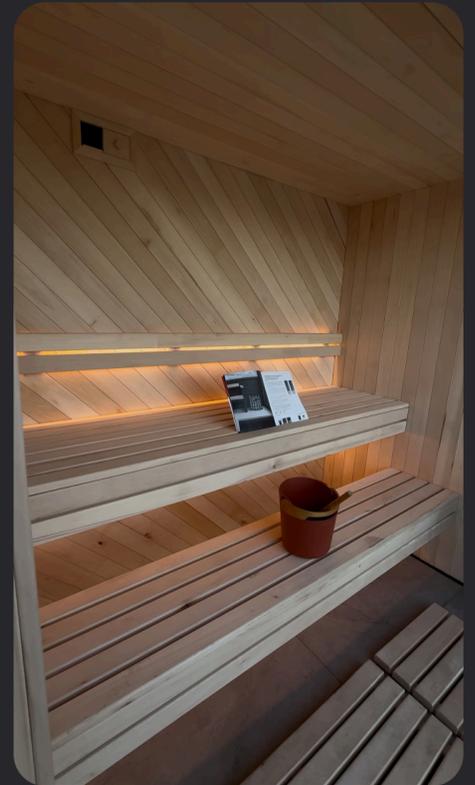

Technical characteristics:

dimensions: 220 × 220 × 230 cm;

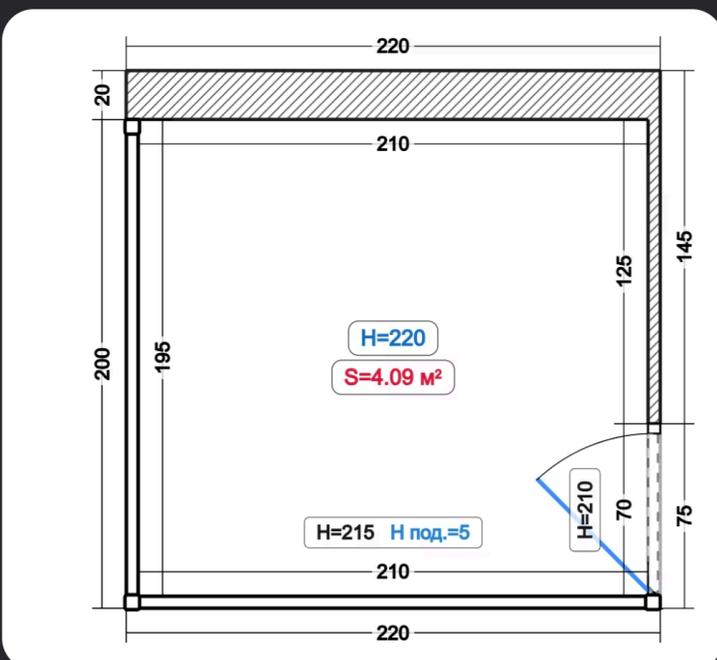

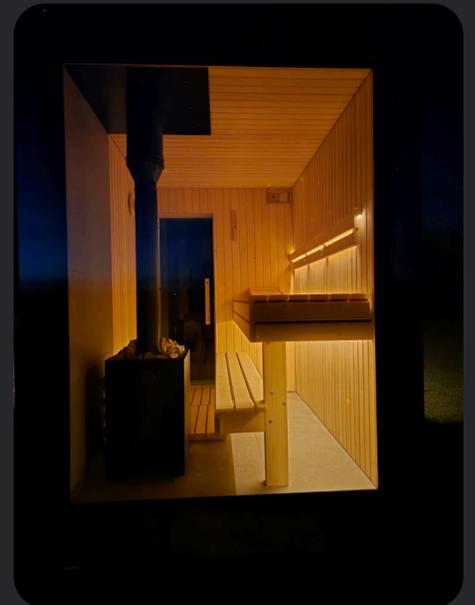

weight: about 1300 kg

Description of the sauna's basic equipment:

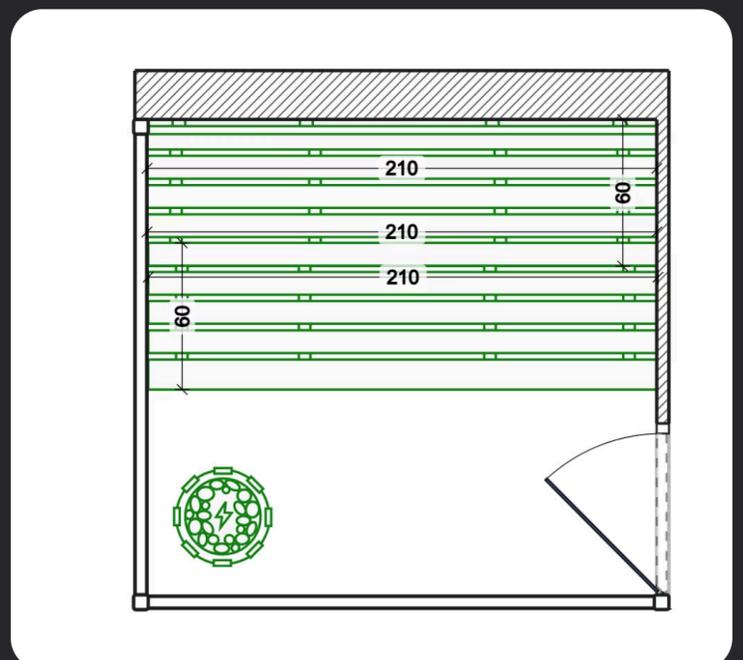

Metal frame, wooden battening, benches and interior walls made of lime wood, LED lighting of backrests and shelves, adjustable ventilation system, wooden floor slats for a comfortable stay, insulation—**Sweetondale basalt wool (non-combustible)**\PIR, facade glazing made of ESG safety glass 8 mm thick with a black enamelled frame, floor covering—porcelain stoneware. The wooden facade is treated with an antiseptic layer and two layers of facade lacquer from the manufacturer Renner (Italy).

This sauna can be executed in different versions depending on the client's wishes.

Basic plan

Layout of wooden furniture and the stove

Basic sauna price "HUB 220" - 8800 Euro (EXW Chisinau)

Features and Model Options- "Hub 322"

Hub 322 is a balanced solution for those who value more space and comfort without a significant increase in the area occupied by the plot. It is suitable for both private homes and tourism projects. Key advantages: increased internal area; panoramic glazing; possibility of installing a shower system; flexible layout options.

Technical characteristics:

dimensions: 322 × 230 × 230 cm

weight: about 1500 kg
